

Advanced Public Economics — Applied Tutorial

Session VI: Microsimulation Models II

Daniel Weishaar

Roadmap for Session VI

Use a microsimulation model for Germany to ...

- ① ... understand complexities of the German tax and transfer system,
- ② ... get a more realistic picture of effective marginal tax rates (EMTR),
- ③ ... understand different components of EMTR,
- ④ ... explore the usefulness of microsimulation to simulate reforms.

GETTSIM — Installation Instructions (Windows / macOS)

GETTSIM is a Python package. I recommend installation via conda.

① Install [Anaconda](#) (Windows/macOS).

② Open a command line:

▶ **Windows:** *Anaconda Prompt*

▶ **macOS:** *Terminal*

③ Create a clean environment (recommended):

3.1 `conda create -n microsimulation python=3.11 -y`

3.2 `conda activate microsimulation`

④ Install GETTSIM + Jupyter **inside the environment**:

4.1 `conda install -c conda-forge gettsim jupyter -y`

⑤ Quick test:

5.1 `python -c "import gettsim; print(gettsim.__version__)"`

⑥ Start notebooks:

6.1 `jupyter notebook`
